

Fossil-free living within one generation...

Ambitious climate targets are accelerating the energy transition...

...and **electrification** will be a **key abatement** option...

...driving **demand** for fossil-free electricity and heat as well as grid capacity

140 TWh – 200 TWh - 250 TWh
Hydro – Nuclear - Wind

Small Modular Reactors are part of the solution

**Standardized
Scalable
Compatible**

Flexible

**Low
carbon
footprint**

**New
options for
localization**

**Heat
production
100-1000
degrees**

**Elec. Power
P2X
Hydrogen
District heat
Peak shift**

.....

**Fits
together
with
renewables**
