🇳🇬 Tre västafrikanska länder börjar vaccinera mot malaria

Benin, Liberia och Sierra Leone har börjat vaccinera barn mot malaria. Vaccinet har visat en betydande minskning av malarisjukdomar och barnadödlighet i inledande afrikanska pilotprogram.

🗳️ Rekordstöd för demokrati, men folk är besvikna på regeringarna. Varför och vad gör vi åt det?

Nästan 9 av 10 vill ha demokrati. Men långt många färre är nöjda med den demokrati de lever i. Det bygger på att det demokratiska system vi har är över 100 år gammalt och behöver uppdateras.

Jonas Birgersson på toppmöte med Clinton och Gates

Sveriges bredbandsapostel Jonas Birgersson, USA:s president Bill Clinton och Microsofts Bill Gates finns med bland de 2000 delegaterna vid ekonomiska toppmötet i Davos. **Svenske IT-gurun Jonas Birgersson ska delta i ekonomitoppmötet i schweiziska skidorten Davos, som börjar i dag.**

Han är i fint sällskap. Bill Clinton, Tony Blair, Bill Gates, och Percy Barnevik ska också dit.

Jonas Birgersson, sveriges egen bredbandsprofet, ska delta i ekonomimötet i Davos.

RYHET! NATURUPPLEVELSE TILL SALU.

Description

Think you can design and build the greatest amusement park in the world? You select the site, you layout the rides. In fact, you control every aspect of running a profitable amusement park; from hiring employees, to developing new rides, to maintaining an adequate supply of soft drinks. Any mistakes, and the bustling hordes of fun-seekers will let you know. Oh, and that Merry-Go-Round in flames is a clue too.

Background

AlphaFold is an AI system developed by **Google DeepMind** that predicts a protein's 3D structure from its amino acid sequence. It regularly achieves accuracy competitive with experiment.

Google DeepMind and EMBL's European Bioinformatics Institute (**EMBL-EBI**) have partnered to create AlphaFold DB to make these predictions freely available to the scientific community. The latest database release contains over 200 million entries, providing broad coverage of **UniProt** (the standard repository of protein sequences and annotations). We provide individual **downloads** for the human proteome and for the proteomes of 47 other key organisms important in research and global health. We also provide a download for the manually curated subset of UniProt (**Swiss-Prot**).

The electric grid is about to be transformed

The technological and regulatory requirements
will be immense, writes Hal Hodson

Sveriges befintliga, ålderstigna elnät kräver betydande investeringar, runt 890–945 miljarder kronor mellan 2021 och 2045, för låg- respektive högscenario. Investeringarna syftar framför allt till att möta den kraftigt ökande elanvändningen, men också att upprätthålla den nuvarande servicenivån. En stor del av investeringen – 587 miljarder – består av så kallade reinvesteringar som kommer behöva göras oavsett framtidsscenario. Omfattningen av nyinvesteringarna beror på produktions- och konsumtionsscenario och beräknas till 302 och 358 miljarder kronor i scenario låg respektive hög för perioden fram till 2045, varav merparten inom transmissionsnätet.

02 The Energy Protocol (EP)

Inspired by the Internet architecture distributed and independent networks that can function as standalone but will benefit greatly from being interconnected with as many compatible networks as possible. EP will include similar concept to peering & routing but for Energy Sharing. In short, the language needed to enable the "Internetification" of energy distribution.

Standing on the shoulders of giants.

A Protocol for Packet Network Intercommunication

VINTON G. CERF AND ROBERT E. KAHN,
MEMBER, IEEE

Abstract — A protocol that supports the sharing of resources that exist in different packet switching networks is presented. The protocol provides for variation in individual network packet sizes, transmission failures, sequencing, flow control, end-to-end error checking, and the creation and destruction of logical process-to-process connections. Some implementation issues are considered, and problems such as internetwork routing, accounting, and timeouts are exposed.

INTRODUCTION

IN THE LAST few years considerable effort has been expended on the design and implementation of packet switching networks [1]-[7],[14],[17]. A principle reason for developing such networks has been to facilitate the sharing of computer resources. A packet communication network includes a transportation mechanism for delivering data between computers or between computers and terminals. To make the data meaningful, computer and terminals share a common protocol (i.e., a set of agreed upon

of one or more *packet switches*, and a collection of communication media that interconnect the packet switches. Within each *HOST*, we assume that there exist *processes* which must communicate with processes in their own or other *HOSTS*. Any current definition of a process will be adequate for our purposes [13]. These processes are generally the ultimate source and destination of data in the network. Typically, within an individual network, there exists a protocol for communication between any source and destination process. Only the source and destination processes require knowledge of this convention for communication to take place. Processes in two distinct networks would ordinarily use different protocols for this purpose. The ensemble of packet switches and communication media is called the *packet switching subnet*. Fig. 1 illustrates these ideas.

Fig. 1. Typical packet switching network.

Energy Storage

STORAGE CAPACITY **100 KWH**

This is your current battery capacity, we recommend that you never go below 90% of your total capacity out of safety concern.

Please choose the amount of your storage you would like to offer to the to the balance provider, as you move the slider you can see how your compensation changes.

Climate Neutral Cities

Energy Communities as core for green transition

Citizens empowered by an Internet architecture inspired way of working together with local resources and decisions can share and support each other without giving up on freedom and independence. New neutral infrastructure can be built to solve local challenges but at the same time help solve global problems.

Open standards and Local marketplaces, supported by innovative financing, policy and procurement through shared best practices, can empower cities to solve even the hardest challenges, one neighborhood at a time.

Opportunities for new social sustainability is created by local eco-system for independent service providers that create new jobs and offer solutions products to all the connected Energy Communities. Then system-Integrators and innovative solution expert can share and spread the concept to any city in need of climate transition to reach climate neutrality.

Stage 3 – Finalize DC based energy network

Replace grid-tied AC inverters with DC based devices to complete the energy network. Includes functionality to export surplus energy to utility grid.

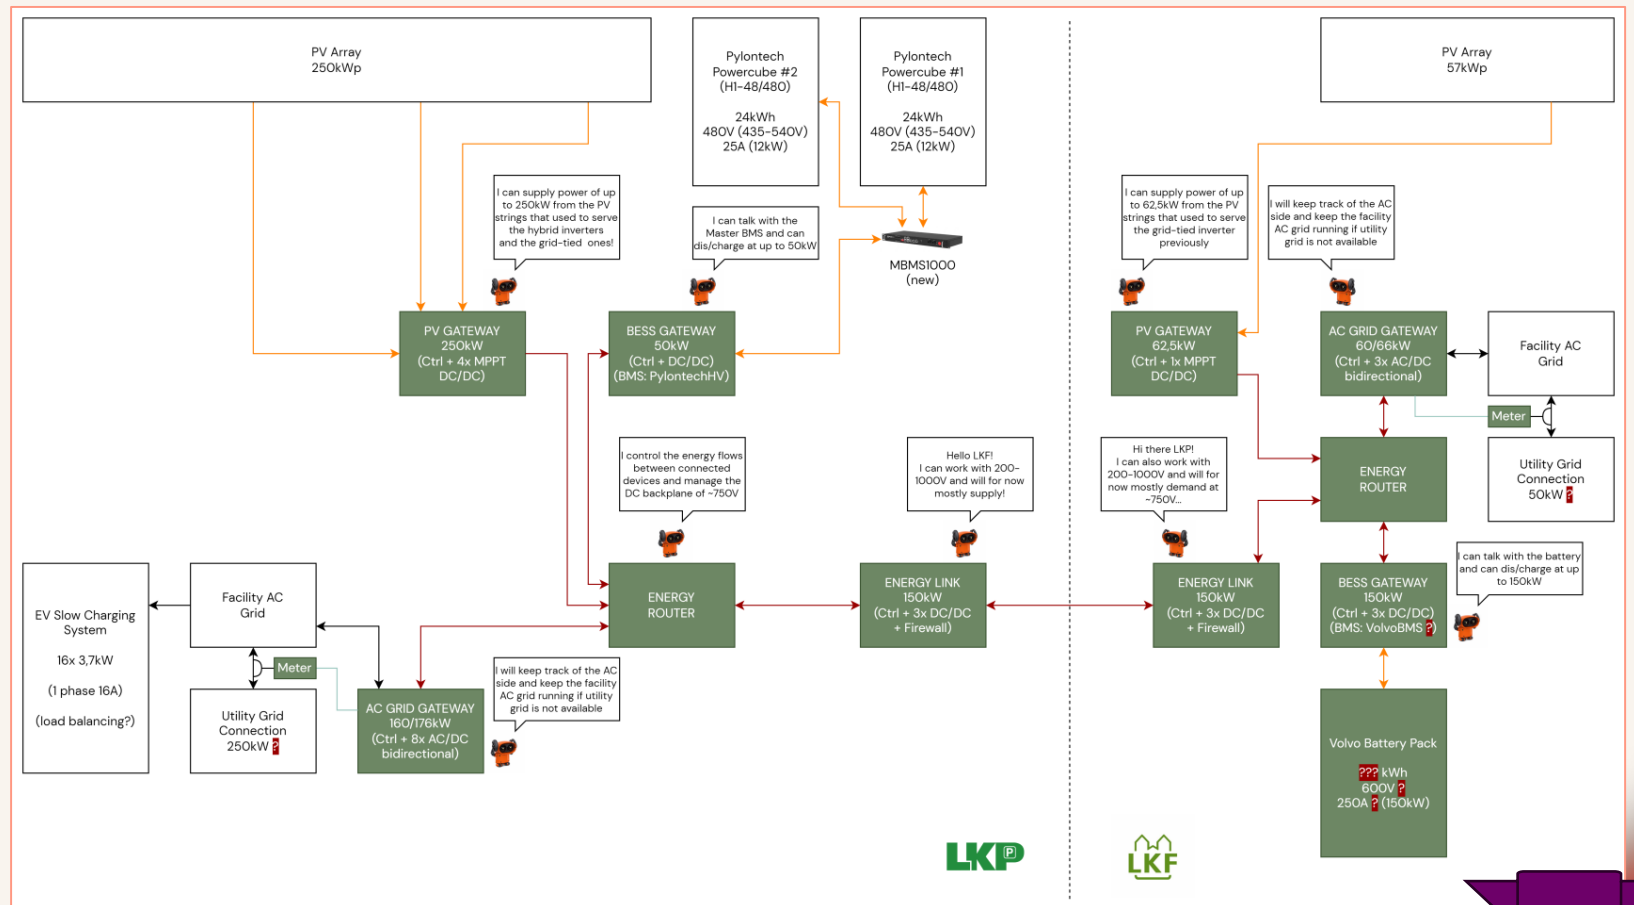

Devices added

1x PV Gateway 62,5kW

3x 62,5kW MPPT Converter
(to existing PV Gateway)

+ Support for energy export to AC grid

To match original AC grid export capacity, additional gateways would be required...

Energy Sharing in Lund

Once proven, locally shared
energy enable a
new energy society
